607. Tate and colleagues use “gender identity,” but we prefer using the term “gender social identity” here to keep “gender identity” as the broadest category that encompasses all the other aspects. Also, self-labeling and self-identity involve social interactions.
608. It is important to note that the field has not yet reached a point where people agree on terminology or which constructs should be included in discussions of gender. For example, what we call “gender expression,” Tate and colleagues (2014) called “gender social presentation.” We believe that “gender expression” is more readily understandable than “gender social presentation” and is used more often in the field at large.
